How-to install abrowser on Devuan

QUICK AND DIRTY WAY (no auto updates)

1. Grab the latest abrowser .deb package for your hardware at here
2. Install with `sudo apt install ./abrowser_90.0+build1-0ubuntu0.18.04.1+9.0trisquel80_amd64.deb` or whatever the name of your deb file is.

FULL REPO INSTALLATION METHOD (for receiving auto updates of abrowser)

Install the trisquel-keyring package from here

`wget https://archive.trisquel.info/trisquel/pool/main/t/trisquel-keyring/trisquel-keyring_2018.02.19_all.deb sudo apt install ./trisquel-keyring...deb`

Add the trisquel 'etiona-updates' repo to your apt sources list

`cd /etc/apt/sources.list.d/ sudo mousepad trisquel.list`

type in the repo line for adding the Trisquel repo for abrowser `deb http://archive.trisquel.info/trisquel/ etiona-updates main`

Apt pinning of the etiona-updates repo to NOT be updated from, but from the abrowser package TO be updated. Create a file with any name (called 'trisquel' here) and put the following apt pinning preferences in it

`cd /etc/apt/preferences.d sudo mousepad trisquel`

type in the apt pinning config into `/etc/apt/preferences.d/trisquel`

Package: * #all packages from this repo
Pin: release a=etiona-updates #tells apt this apt that this pin is just for this repo
Pin-Priority: -1 #negative number pin tells apt to ignore these packages

Package: abrowser #only for the abrowser package
Pin: release a=etiona-updates #same repo
Pin-Priority: 700 #says that just for this one package, give it a high priority, so that it can be installed and updated normally

Package: trisquel-keyring #only update if there is a new trisquel-keyring
Pin: release a=etiona-updates #same repo
Pin-Priority: 700 #give this one package a high pin priority so that it will update normally

update and install

`sudo apt update sudo apt install abrowser`

should work!
